THE TREATMENT

Despite the treatment being suitable for any type of skin such as dry, oily, pigmented or normal, it is important to note that it is not recommended to anybody. People who are not suitable for this procedure are those with any kind of skin condition including active acne skin or cystic acne, eczema, psoriasis, open wounds, pregnant and breastfeeding women, or anybody taking hormonal medication. When it comes to minor risks It is very likely that you experience a little redness, dryness, swelling, bruising, or flaking skin immediately after the procedures. These may last for a few you upcoming days. Even though, potential side effects are mostly minor there is a variety of major short term and long-term issues associated with the procedure that may occur. Short-term issues could include problems such as infections, pigmentation irregularities, changes or allergic responses. Long-term issues may be associated with adverse effects on skin texture throughout the time with repeated applications or scarring. In general, bleeding is not a common reaction after microneedling, however, it may happen after a deeper treatment or to those who are taking blood-thinning medications.

Initial

RISKS AND COMPLICATIONS

BB Glow treatment is 100% safe even in a long-term applications if high-quality materials and sterile tools are used and the treatment is delivered by a trained professional. The micro needling technology prevents needles to go deep into the skin, therefore, no damage to the skin can be made. In general, the procedure is comfortable, however, some tingling and tightness in the skin can be felt. Furthermore, the BB serums are free of alcohol, allergens, benzophenone, fragrances, formaldehyde, parabens, mineral oils, or synthetic colouring. BB GLOW INFORMED CONSENT

PREGNANCY & NEUROLOGIC DISEASE

I am not aware that I am pregnant and I am not trying to get pregnant, I am not lactating (nursing). I do not have any significant neurologic disease including but not limited to myasthenis gravis, multiple sclerosis, lambert-eaton syndrome, amyotrophic lateral sclerosis (ALS), and parkinson's. Initial

PAYMENT

I understand that this is an "elective" procedure and that payment is my responsibility and is expected at the time of treatment. Initial

PHOTO CONSENT

I give permission to take before and after photographs of my treatment to be used to monitor my treatment, training purposes, and advertising. Initial

RIGHT TO DISCONTINUE TREATMENT

I understand that I have the right to discontinue treatment at any time. Initial

BEFORE TREATMENT

If you are concerned if the BB Glow treatment is suitable for you, we do recommend to discuss this with either your dermatologist or medical skincare professional who is experienced in these types of treatments in order to achieve the best possible outcomes and to minimise the risks. For example, certain types of medication, such as those for acne treatment or for blood-thinning, may need to be stopped taking beforehand to reduce the risk of side effects. If you are concerned about an allergic reaction, a test treatment can be done to see how your skin reacts with BB creams application before the procedure. The test is usually done either on the neck or under the hairline. Initial

AFTER TREATMENT

After you have had your BB Glow treatment it is recommended to follow a few steps in order to assure the most effective outcome and lasting of the treatment.

No excessive facial cleansing for a minimum of 24 hours

No skin touching for a minimum of 12 hours

5 days with no make-up or skin peel

7 days with no swimming

14 days with no direct heat including sunbathing, sauna, or sun bed

We do also recommend an application of moisturising and nourishing cream with a high factor SPF .Initial

I understand this is an elective procedure and I hereby voluntarily consent to the BB Glow treatment The procedure has been fully explained to me. I also understand that any treatment performed is between me and the Service provider who is treating me and I will direct all post-operative questions or concerns to the treating clinician. I have read the above and understand it. My questions have been answered satisfactorily.

I accept the risks and complications of the procedure and I understand that no guarantees are implied as to the outcome of the procedure. I also certify that if I have any changes in my medical history I will notify my Service Provider professional who treated me immediately.

BB GLOW FREQUENTLY ASKED QUESTIONS

What is BB Glow?

BB Glow is a combination of powerful tinted serum applied using Microneedling method - an intensive skin treatment that uses state-of-the-art technology to penetrate first layers of the skin with microneedles which are rapidly released from a Microneedling pen (don't worry - it's painless!). One of the main benefits of basic microneedling is stimulation of natural collagen production and skin rejuvenation, where the BB Glow serum adds incredible nutrients and most importantly the color tint you desire. BB Glow is designed to improve the look and feel of your skin fast. Visible improvements will be apparent immediately after the first appointment. The serum will also continue to work for two weeks after your treatment, and anti-aging benefits will continue to roll in in the coming weeks as your skin naturally rejuvenates itself after microneedling manipulation.

Some of the improvements you may notice include:

- More even skin tone
- Brighter, more radiant skin
- Fewer freckles
- Less skin discoloration
- Fewer fine lines and wrinkles

What is the application procedure?

Each application takes about 1,5 to 2 hours depending on a skin type of a client. A consultation is necessary before the procedure due to the selection of the closes shade of BB glow. Usually, two to three BB glow are mixed together to customise a color for each client.

How long does it last?

The effects of the treatment are individual and may vary from person to person depending on the skin condition and a post treatment after care. Immediate results may be seen straight after the first procedure. However, the BB serum has a cumulative effect which means that it builds up under the skin with every single treatment. Therefore, a number of 2 to 5 treatments at 10 to 14 days intervals are recommended to achieve the best long-lasting results possible.

Expected lasting effect

- 1 to 2 applications = lasting up to 2 to 3 months
- 3 to 5 applications = lasting up to 9 months

What are the Benefits of BB Glow Treatment?

There are two main reasons that make BB Glow so attractive. Firstly, the procedure makes your skin appear as if you are wearing foundation without having any. It is a vanity reason, but nevertheless it can have a huge confidence boost for someone struggling with acne scars or pigmentation to be able to cover them up semi-permanently. Secondly due to microneedling component of BB Glow it is a powerful anti-aging procedure, boosting collagen production.

Not to get ahead of ourselves, why is Collagen so crucial? Collagen is a natural protein found throughout the body, it provides the skin with structure, elasticity, and vibrancy. At a young age we have plenty of it and it is naturally replenished by the body; unfortunately, as we age the body produces less collagen. This leads to wrinkle formation, loss of skin elasticity and firmness. Therefore, stimulating collagen production can improve the look and texture of your skin, lessen the appearance of fine lines and wrinkles.

Another added benefit of BB Glow treatment resides in the serums, which are made from purely natural and potent nutrients. Microneedling technique used to apply BB Glow serums help them penetrate deeper into the skin delivering the nourishing components where they will have the most benefit.

Will BB Glow clog my pores?

No, BB Glow will not clog pores. This idea originated from a traditional makeup where particles are too large and the ingredients are not designed to benefit the skin per se. BB Glow serums are formulated to be beneficial for the skin, even the tint that provides the color is completely natural and non-comedogenic, meaning free of silicones; therefore it will not clog the pores.

BB GLOW AFTERCARE

Proper aftercare following your procedure is necessary to achieve the best results. Keep in mind that in many cases, some unevenness of color is to be expected. This is the purpose of the touch-up visit. Please review the following directions and refer to them as necessary. If during your healing process you have any questions or concerns, please contact your technician.

Ice packs protected with a cloth may be applied as necessary to reduce swelling. Sleeping slightly elevated helps alleviate swelling sometimes seen the morning after facial procedures.

Wash your hands before touching any treated area. Cotton-tipped applicators may be used to gently cleanse the eye area. Do not expose the area to dirty or unsanitary conditions. Wearing glasses outdoors is a good way to protect new eyeliner from dust, etc., that can stick to healing agents. Apply recommended healing agents sparingly.

Some itching is normal. DO NOT PICK, PEEL, OR SCRATCH the treated area or your color may heal unevenly and you risk scarring and infection.

No makeup is to be applied for 72 hours after the procedure. After any eyeliner procedure, use new mascara. Do not use an eyelash curler for two weeks.

Do not expose your healing skin to direct sun, tanning beds, hot tubs, (tub baths if body area treated), saunas, salt water, chlorinated pools, direct shower spray, hot water, skin creams, ointments, or lotions other than what you have been instructed to use for 2 weeks following your procedure.

LONG-TERM CARE

Use a good sunscreen daily – even the lips require protection. Sun exposure will fade your permanent cosmetics and may cause irritation even years later.

If you are planning chemical exfoliation, MRI, or other medical procedure, please inform your physician of your cosmetic tattoo.

If you donate blood, it is a Red Cross policy that you must wait one year after any tattooing procedure in unregulated states – check if restrictions apply to you.
